# Aksharam GlyphKey

## The Universes Sing a Lullaby in the Dark

### The Lock and the Key · The Transformed Utterance · The Language on the Throne of Zero ·
↪  The Magic in the Throat

**Aksharam is an ALQC language system. Its keyboard is not a font laid over English. It is
↪  executable Aksharam law.**

## One Keyboard Engine Across Linux, Windows, and Mac

Aksharam does not have three different keyboard laws for three operating systems. The same
↪  compiled Keyman keyboard engine is built once from the same Aksharam executable body and
↪  is carried into all three desktop packages.

```text
                    shared Aksharam law
                           ↓
             aksharam_keyboard_data.py
                           ↓
               generate_keyboard.py
                           ↓
              aksharam_glyphkey.kmx
                 ↙         ↓         ↘
             Linux       Windows      Mac
```

The operating-system difference is packaging and host integration, not Aksharam law.

- **Linux / Ubuntu** uses the shared keyboard engine and additionally carries the Linux
↪ selection layer: `aksharam_selection_math.py`, `aksharam_selection_phonetic.py`,
↪ `xbindkeys.aksharam`, and `start_selection.sh`.
- **Windows and Mac** use the same compiled keyboard engine and the same desktop
↪ package-filtering step through `generate_desktop_kps.py`.
- There are currently **no Windows-only source files** and **no Mac-only source files** in
↪ the keyboard build.

The tree below is the build map. Files marked `[ALL]` belong to all three builds; `[WINDOWS
↪ + MAC]` is shared only by those two desktop packages; `[LINUX]` is Linux host
↪ integration.

    └── mac/                                       [OUTPUT]
```

The canonical documents under `docs/` govern the language. The production compiler does not parse those documents at runtime. The executable snapshot used to reproduce the keyboard is `build/src/aksharam_keyboard_data.py`; the canonical documents remain the authority against which that executable body is audited.

Build all three desktop packages from the repository root with:

```bash
./build/build.sh
```

The build generates the Keyman source transiently, compiles the shared `.kmx` engine, packages the three desktop outputs, runs validation and Keyman Core conformance, and removes disposable compiler intermediates afterward.

English is the entrance, not the identity. A familiar key becomes a coordinate; the coordinate emits an Aksharam body; bodies enter relation; relation folds; registered language resolves; the resolved body can become mathematics, can become sound, can become silence, and can still return through the path by which it became itself.

```text
English-access coordinate
        ↓
Aksharam base body
        ↓
Court / Parliament / registered Whole
```

```
        ↓
resolved written body
        ↓
Shape-of-Sound
        ↓
human utterance
```

The lock is invariant structure. The key is lawful transformation. The transformed utterance is not a translation pasted over the result; it is the same body in another office.

Aksharam therefore keeps one governing seal:

```text
ALL TRANSFORMATION REMAINS LANGUAGE
```

And one Tripartite body:

```text
Language × Mathematics × Poetry
```

Language gives relation. Mathematics gives law. Poetry gives breath. None is decoration for the others.

What Aksharam Is

Aksharam is a written language, transformation lattice, mathematical surface, phonetic system, poetic instrument, and executable keyboard bound into one object system.

A keypress may begin as a physical coordinate and end as a body visually remote from the key that opened it. That distance is not loss. The route is registered. The body may compress without forgetting where it came from; it may unfold without inventing a history it never had.

```text
access → body → relation → fold → resolution → breath
   ↑                                              ↓
   └──────────────── identity ────────────────────┘
```

This is the central Aksharam motion: outward enough to transform, exact enough to return.

Compression is **density without amnesia**.

Silence is **structure without sound**.

Poetry is **law in motion**.

The ALQC Body

Aksharam follows ALQC without separating the language from the mathematics that governs it.

```text
Truth = 1
D-COMP = 0
Shadow Debt = paritied
```

The written form may change. The spoken form may lengthen or contract. A lexical body may collapse to one Whole. A Court may hold two Goetics in ordered relation. A Parliament body may resolve again. Numbers may participate while remaining themselves.

Through each movement, the invariant is not abandoned.

The path out is still the path back.

The English-Access Skeleton

Aksharam uses the twenty-six ordinary English keyboard positions as access coordinates. The Latin letters are not the language body. They are the familiar human surface through which the body is reached.

The tactile counterpart is the corresponding English Braille letter cell. QWERTY and Braille are access offices; the Aksharam body remains one.

QWERTY	Braille	Aksharam	Shape-of-Sound
A	⠁	✡	`abd`
B	⠃	☽	`av`
C	⠉	⌬	`ig`
D	⠙	❄	`ek`
E	⠑	◎	`fe`
F	⠋	♋	`en`
G	⠛	♌	`myr`
H	⠓	⧗	`dr`
I	⠊	✪	`el`
J	⠚	♈	`ash`
K	⠅	♎	`me`
L	⠇	❁	`av`
M	⠍	♏	`da`
N	⠝	❀	`so`
O	⠕	✰	`ahn`
P	⠏	♑	`on`
Q	⠟	♊	`eri`
R	⠗	⊛	`ri`
S	⠎	✳	`ot`
T	⠞	⬡	`al`
U	⠥	♍	`yam`
V	⠧	ℂ	`veh`
W	⠺	♒	`nyx`

X	⁘	♉	`us`
Y	⁙	♐	`ka`
Z	⁖	♓	`ai`

The key is only the door. The constellation is the body.

The Four Transform Laws

I · Access → Glyph

Registered access enters Aksharam through the base coordinate plane.

```text
REGISTERED ACCESS → GLYPH BODY
```

Case does not redefine the coordinate. When folding is active, the same access sequence
↪ follows the same registered path.

II · Dual Goetic → Court

The twelve Goetics form a complete ordered 12 × 12 Court lattice: **144 Courts**.

Contiguous Goetics resolve left-to-right in non-overlapping ordered pairs.

```text
DUAL GOETIC → COURT
```

Order is law. `AB` need not be `BA`. Relation carries direction.

III · Dual Parliament → Resolution Body

The active Parliament law contains **24 registered ordered pairs**.

```text
DUAL PARLIAMENT → REGISTERED RESOLUTION BODY
```

Resolution proceeds left-to-right without overlap. A Third-Law result does not recursively
↪ consume itself again under the same Third Law.

IV · Universal Numerical State

```text
N → N
NUMBER = COMPRESSED = UNCOMPRESSED
NUMBER IN STRING = ACTIVE TRANSFORM
```

A number participates by remaining itself.

The Quadrite is therefore:

```text
ACCESS → GLYPH
DUAL GOETIC → COURT
DUAL PARLIAMENT → RESOLUTION BODY
NUMBER → UNIVERSAL TRANSFORM
ALL TRANSFORMATION REMAINS LANGUAGE
```

A Word Has an Anatomy

A registered word does not become its terminal Whole merely because the final Latin letter has been pressed.

The body remains alive while another registered continuation is still possible. A **non-letter boundary** closes the access sequence and commits the registered Whole: Space, punctuation, a numerical/constellation key, or another lawful boundary.

That distinction matters. Aksharam does not prematurely close a body simply because a shorter registration exists inside a longer one. Longest lawful continuation is preserved.

The current executable build carries **452 registered transformation rows**. After duplicate and conflicting access registrations are resolved by established precedence, the generator reports **426 supported triggers from 428 distinct lexical triggers**.

Every registered path preserves its own provenance. This matters because two different words may arrive at the same Whole. The keyboard therefore does not unfold by guessing backward from a glyph. It carries the exact originating registration invisibly and returns through that route.

Unfold

`Alt+Backspace` moves backward through the registered word:

```text
Whole → Third → Second → First
```

One press descends one lawful level. If Second and Third are identical, the visible body may remain the same while the provenance depth changes. At First, further `Alt+Backspace` is inert.

Ordinary Backspace never unfolds. It remains deletion.

Refold

`Alt+Space` performs the opposite movement: it refolds the retained word through every lawful available stage, emits `·`, and begins the next word.

Ordinary Space does not force an explicitly unfolded word to close again. It emits `·` and
↪ preserves the word at the depth the writer chose.

The word remembers. The writer decides whether to open it or close it.

Shift, Caps Lock, and the Right to Refuse the Fold

Aksharam can be asked not to fold.

- `Shift + mapped letter` → direct base glyph, folding suppressed.
- `Caps Lock + mapped letter` → direct base glyph, folding suppressed persistently.
- `Shift + Caps Lock + mapped letter` → direct base glyph, folding suppressed.

The modifier does not rewrite the alphabet. It changes the state of transformation.

This is not uppercase/lowercase Aksharam. It is folded/unfolded access.

The Shape of Absence

`·` is Aksharam Space: the Shape of Absence.

It is not empty typography. It is unspoken silence, breath, interval, word-space, and
↪ structural separation.

In phonetic rendering:

```text
· → ordinary space
```

Silence does not need to become a sound in order to participate in language.

The absence has a body because the pause has an office.

Shape-of-Sound — The Magic in the Throat

The current canonical speaking table lives at:

```text
docs/the_shape_of_word.txt
```

Written law resolves first. Shape-of-Sound is read from the body that remains.

```text
written law first
spoken realization second
one identity throughout
```

```

The direct bodies, all 144 Courts, numerical bodies, terminal bodies, Enochian bodies, and sovereign multi-glyph bodies have registered speaking forms.

A multi-glyph speaking body is matched as a whole before its components. Thus:

```text
☽☉☾ → regia
```

not three unrelated syllables merely because the body contains three visible signs.

Aksharam phonetics moves through tension and release: liquid consonants, rolling motion, open vowels after constriction, breath beside friction, stone beside water. Bodies such as `khi`, `okh`, `druh`, `abd`, `nyx`, and the open vowel forms give the language a changing mouth-shape rather than one repeated texture.

The written body can be dense while the spoken body remains fast enough to live. Character count does not dictate human duration. The body determines the sound; the throat gives the sound time.

The First Spell

Six utterances are programmed as phonetic Aksharam spell-bodies:

Utterance	First body	Natural stopping body
`eloi`	◎❁✡✪	؏
`sabachtany`	❋✡☽✡⌬⧗⬡✡❁➶	▽☽ʕ✷ʿ➶
`anima`	✡❁✪♏✡	ʿ✪♏✡
`culpa`	⌬♍❁♈✡	⌬♍❁♈✡
`decire`	❄◎⌬✪⊛◎	Ⱥ⊔ᛋ
`entera`	◎❁⬡◎⊛✡	؏ᛁᛈ

They are not English semantic registrations. The Latin letters record remembered utterance. Their Aksharam bodies enter the ordinary structural law, fold only where Aksharam licenses a fold, and stop where the law stops.

Their phonetic identity remains the utterance:

```text
eloi eloi sabachtany anima culpa decire entera
```

The written body may move. The spell-word does not cease to be itself.

Grammar Is Not Decoration
```

Aksharam constellations are selected by office. Their identity persists across language, code, and mathematics.

`&`	ॐ	Astersand
`*`	⁜	Crosstellation
`~`	⁓	Cantillation
`` ` ``	⟠	Supervenience / Prosody
Space	·	Shape of Absence

The slash law is explicit:

```text
\ → ⋱   Return / Closure
/  → ⋰   Opening / Outward
```

The glyph is not a decorative substitute for punctuation. The glyph is the registered body of the operation.

Numbers and Mathematical Keys

The number row and numeric keypad emit the same Aksharam numerical bodies.

Value	Glyph	Shape-of-Sound
0	𐤚	`zen`
1	☿	`pon`
2	♀	`ael`

3	𐤂	`gaya`
4	♂	`wil`
5	𐤅	`pay`
6	ℏ	`eve`
7	𐤀	`ahc`
8	Ψ	`no`
9	𐤍	`noo`

Additional structural controls include:

- `NumPad *` → `⁜` Crosstellation / multiplication
- `NumPad +` → `ॐ` Astersand / addition
- `NumPad -` → `⋯` Smite / subtraction
- `NumPad .` → `⁖` Parallel Separation / decimal separator
- `NumPad /` → `⁎` Halfstellation / division
- `Shift+2/3/4/5` → `⊖ ⊕ ⊕ ⊕` / Q_0–Q_3
- `Ctrl+Shift+6` → `∵` Collection Open
- `Shift+6` → `∴` Collection Close
- `Shift+8` → `⁜` Crosstellation

Direction, Paragraph, Prosody

Aksharam reserves movement as language:

- `Shift+↑` → `↑` North / Up / Ascent
- `Shift+↓` → `↓` South / Down / Descent
- `Shift+→` → `→` East / Right / Outward
- `Shift+←` → `←` West / Left / Return
- `Tab` → `⁘` Paragraph Open
- `Shift+Enter` → `⁖⁘` Paragraph Close, then native host Enter

Unclaimed combinations remain native to the operating system or application.

Aksharam takes only the keys it has lawfully named.

Mathematical Bodies

The twelve Goetics may be called directly in mathematical office with:

```text
Alt+Shift+Goetic
```

The result is the registered mathematical body of that Goetic.

On Linux/Ubuntu, arbitrary selected Aksharam can also be transformed through the packaged selection layer:

```text
Alt+Shift+Enter → selected Aksharam → mathematical body
```

```
Alt+Shift+Esc   → selected Aksharam → Shape-of-Sound phonetic text
```

The phonetic selection transform preserves ordinary whitespace, turns `·` into natural space, recognizes multi-glyph speaking bodies longest-first, preserves the First Spell utterances, and returns Aksharam grammatical constellations to ordinary textual grammar.

These arbitrary-selection helpers are presently packaged only in the Linux/Ubuntu distribution. The Windows and macOS packages contain the same working keyboard engine but do not claim native host-selection integration yet.

One Object, Many Offices

Aksharam does not assign one sign to language, another to code, another to mathematics, and then ask the reader to pretend they correspond.

The same body changes office.

```text
phonetic body
    = semantic body
    = mathematical body
    = computational body
    = transformational body
```

`⟜⟜` binds because Binding is its office.

`::` separates because Parallel Separation is its office.

`·` is silent because absence is its office.

The identity is not visual resemblance. The identity is structural function held across domains.

Poetry: Law Given Breath

Aksharam poetry does not step outside the engine to become beautiful.

A line may remain unfolded because the writer refuses closure. A phrase may collapse because density is the point. A silence may widen. A repeated body may acquire cadence without losing identity. Cantillation may bend the breath; Prosody may carry relation above the literal sequence; a paragraph may open and close as a structural body rather than a typographic accident.

The mathematics does not stand behind the poem like scaffolding waiting to be hidden.

The mathematics is the pressure inside the poem.

The poem is what that pressure sounds like when it learns to breathe.

```text
Language builds meaning.
Mathematics builds law.
Poetry builds living motion.
```

The same body, three offices. The same river, three names for where it is touched.

Canon and Executable Authority

The canonical Aksharam sources are held under `docs/`:

```text
docs/Aksharam_Legend.md
docs/TRANSFORMATIONS_ALQC_WORDS.md
docs/the_shape_of_word.txt
```

They govern, respectively:

- constellation identity, keyboard topology, Courts, Parliament law, numbers, operators, controls, and structural meaning;
- registered lexical paths `English → First → Second → Third → Whole`;
- post-resolution Shape-of-Sound speaking bodies.

The production keyboard deliberately does **not** parse Markdown at build time or runtime. Its executable snapshot is static build-local data:

```text
build/src/aksharam_keyboard_data.py
```

The generator consumes that executable body and produces the transient Keyman source. This keeps the runtime package independent of the documentation tree while allowing the executable snapshot to be audited against canon.

Current executable counts:

```text
26   direct coordinates
12   Goetics
144  ordered Courts
24   Third-Law Parliament pairs
452  registered transformation rows
6    First Spell utterances
```

Build Tree

The repository keeps source, tests, package resources, and final installers separate.

```text
build/
├── build.sh
├── src/
│   ├── aksharam_keyboard_data.py
│   ├── generate_keyboard.py
│   └── generate_desktop_kps.py
├── tests/
│   ├── validate_keyboard.py
│   ├── full_keyboard_conformance.py
│   └── keyman_core_probe.c
├── package/
│   ├── aksharam_selection_math.py
│   ├── aksharam_selection_phonetic.py
│   ├── xbindkeys.aksharam
│   ├── start_selection.sh
│   ├── readme.htm
│   └── welcome.htm
├── linux_ubuntu/
│   └── aksharam_glyphkey.kmp
├── windows/
│   └── aksharam_glyphkey.kmp
└── mac/
    └── aksharam_glyphkey.kmp
```

Build from the `Aksharam_GlyphKey/` directory:

```bash
./build/build.sh
```

The build creates compiler intermediates only long enough to compile and test them.
↪ Successful completion removes the generated staging body again. The platform directories
↪ are kept for finalized installers, not compiler debris.

Three Desktop Bodies

Linux / Ubuntu

```text
build/linux_ubuntu/aksharam_glyphkey.kmp
```

The Linux package contains the compiled keyboard plus the packaged mathematical and phonetic
↪ selection helpers and their `xbindkeys` launcher/bindings.

Windows

```text
```

```
build/windows/aksharam_glyphkey.kmp
```

The Windows package contains the compiled keyboard and Keyman package
↪ metadata/documentation. Linux-only selection helpers are excluded.

macOS

```text
build/mac/aksharam_glyphkey.kmp
```

The macOS package carries the same compiled Keyman keyboard engine and the same clean
↪ desktop package payload as Windows.

All three platform packages carry the same `.kmx` keyboard engine. Platform packaging
↪ changes the surrounding helper payload; it does not change Aksharam law.

Conformance

The keyboard is not declared correct because the source looks plausible.

It is executed through Keyman Core.

The current conformance body exercises direct coordinates, Shift/Caps suppression, Goetics,
↪ all 144 Courts, all 24 Third-Law pairs, registered words, boundary-triggered Whole
↪ closure, exact provenance-aware unfolding, refolding, ordinary Backspace deletion,
↪ numbers, punctuation, paragraph controls, mathematical bodies, First Spells, and the
↪ corrected slash directions.

Current engine result:

```text
KEY_TESTS 1902 TOTAL; 1902 PASS; 0 FAIL
```

The Linux-installed `.kmx` has also been tested directly rather than only through the
↪ staging build.

The law is compiled. The body is exercised. The output is compared.

The Throne of Zero

Zero is not evacuated from the system.

```text
𑜫 = 0
0 remains 0
0 participates
```

Silence is not evacuated either.

```text
· = manifested absence
```

A language that can only speak presence cannot speak the whole field. Aksharam keeps room for the interval, the unsounded breath, the unstruck chord, the state that participates precisely by not becoming something else.

The throne of zero is therefore not a hole.

It is a seat.

Closing Formula

Aksharam is the lock and the key because the same invariant both constrains and opens transformation.

It is the transformed utterance because language enters mathematics and does not cease to be language.

It is the language on the throne of zero because number, silence, absence, and state remain active bodies rather than discarded gaps.

It is the magic in the throat because the final written body can become human sound without surrendering the structure that made it.

```text
English gives access.
Aksharam gives transformation.
ALQC gives law.
Shape-of-Sound gives breath.
Silence gives interval.
Poetry gives motion.
The utterance returns carrying its history.
```

The body changes. The invariant remains. The language returns alive.

Aksharam_Legend.md

```
# Aksharam Legend

This legend records the active Aksharam Constellations, Directional Operators, and Digits.
↪  Each constellation keeps one identity across language, code, and mathematics.

## Canonical Phonetic Surface — Shape of Sound

`translated bodies/the_shape_of_word.txt` is the canonical authority for spoken Aksharam.
↪  There is one phonetic speaking body per Glyph/Aeon; there is no second phonetic layer.
↪  Written law resolves first; Shape-of-Sound is the human phonetic realization of the
↪  resolved body.

```text
English-access skeleton / registered utterance
        ↓
First Transform Law
        ↓
Second Transform Law — Court relation
        ↓
Third Transform Law — resolved Aksharam body
        ↓
Shape-of-Sound
        ↓
human utterance
```

The written body and the speaking body are one identity in different office. Registry inputs
↪ remain access coordinates. The final spoken value is read from the final resolved body.
↪ Composite authored utterance bodies are read as wholes before their component glyphs.
↪ The First Spells preserve the originating utterance through every lawful written fold.

```text
Truth = 1
D-COMP = 0
Shadow Debt = paritied
ALL TRANSFORMATION REMAINS LANGUAGE
```

The First Spells

The six remembered phonetic utterances enter their Aksharam glyph forms, fold only where the
↪ law carries them, and stop where the law stops. These first-spell registrations preserve
↪ phonetic identity across the written fold: glyph form 1 and lawful folded glyph form 2
↪ are different written states of the same uttered spell-word. The final pronunciation
↪ returns the originating utterance itself.
```

Phonetic utterance	Glyph form 1	Lawful folded glyph form 2	Invariant spell pronunciation
`eloi`	⌾❁☆✪	ﾚﾗ	`eloi`
`sabachtany`	❋✡☽✡⌬⧗⬡✡❁➶	∀☽ᐟ✷ᐟ➶	`sabachtany`
`anima`	✡❁✪ℳ✡	ᐟ✪ℳ✡	`anima`
`culpa`	⌬♍❁ᘏ✡	⌬♍❁ᘏ✡	`culpa`
`decire`	❄⌾⌬✪⊛⌾	ᗅ山ᕒ	`decire`
`entera`	⌾❁⬡⌾⊛✡	ﾚﾛ	`entera`

Always Striking the Chord preserves the originating utterance while Aksharam law moves the written body beneath it.

Aksharam Constellations

Symbol	Meaning	Compressed Definition
ʃ	Left Moon Beam	Opens bracketed enclosure: array, matrix, indexed field, interval, or isolated data-space.
ʅ	Right Moon Beam	Closes bracketed enclosure.
⟩	Left Ley	Opens inward grouping, containment, arguments, or order-of-operations.
⟨	Right Ley	Closes inward grouping or containment.
□	Will o' Wisp Open	Opens outward/scoped enclosure: object, set, function, highlighted boundary, or definition.
□	Will o' Wisp Close	Closes outward/scoped enclosure.
∷	Parallel Separation	Separates parallel fields, clauses, values, or mathematical difference.
⟜	Binding	Binds one side to another: assignment, equality, or resolved relation.
⸤	Quotation Open	Opens quoted text or a quoted formal expression.
⸣	Quotation Close	Closes quoted text or expression.
∴	Field Pointer Right	Points rightward into a field, value, or mapping.
∴	Field Pointer Left	Points leftward toward a field, key, or returning mapping.
∔	Joining	Joins values, clauses, fields, or mathematical composition.
∴	Key / Value Hinge	Hinges a key or name to the value or relation it opens.
⁙	Inquiry	Marks a question, query, unknown, or sought relation.
∴	Statement	Marks assertion, force, declaration, or exclamation.
·	Aksharam Space / Shape of Absence	Unspoken silence, breath, interval, word-space, or structural separation in semantic writing.
⋱	Return / Closure	Backward-returning or closure modifier.
⋰	Opening / Outward	Forward-opening or outward modifier.
∴∷	Paragraph Open	Opens a paragraph or larger structured statement field.
∷∴	Paragraph Close	Closes a paragraph or larger structured statement field.
∴ over ⟜	Binding Hinge	Binds a resolved key/value, solution, or equivalent result.
⋇	Crosstellation	Multiplicative crossing.
⁜	Halfstellation	Division relation.
…	Internal Continuation	Links names, identifiers, fields, or subscripts without ending the structure.
⋯	Smite	Middle-line strike, division, or separating cut.
ॐ	Astersand	Conjunction, ampersand relation, or addition.
∵	Collection Open	Opens a collection or grouped collection structure.
∴	Collection Close	Closes a collection or grouped collection structure.
⁞	Vertical Line	Vertical relation, pipe, or structural divider.

Directional Operators

Symbol	Direction	Keyboard	Compressed Definition
↑	North / Up / Ascent	`Alt + Shift + 2`	Upward, rising, ascending, or upward-mapping relation.
↓	South / Down / Descent	`Alt + Shift + 3`	Downward, falling, descending, or downward-mapping relation.
→	East / Right / Outward	`Alt + Shift + 4`	Rightward, forward, outward, or propagating relation.
←	West / Left / Return	`Alt + Shift + 5`	Leftward, inward, returning, or reverse-mapping relation.

Q-Glyph Mathematical Operands

The four Q-glyphs are direct mathematical operands on the shifted `2 3 4 5` keys. Their established glyph identities remain unchanged.

Key	Q-State	Glyph
`@`	Q_0	⊖
`#`	Q_1	⊕
`$`	Q_2	⊕
`%`	Q_3	⊕

Aksharam Digits
Symbol	Value	Shape-of-Sound
𐤟	0	`zen`
☿	1	`pon`
♀	2	`ael`
⚷	3	`gaya`
♂	4	`wil`
♃	5	`pay`
♄	6	`eve`
⛢	7	`ahc`
♆	8	`no`
♇	9	`noo`

GrimChain Keyboard Bearing

The English letter is the physical QWERTY coordinate. The keyboard target prioritizes the least-common English phonetic compounds. Enochian Understandings remain fixed.

Enochian invariant: The Enochian glyphs and their established identities are set in stone. They are not candidates for remapping, replacement, reassignment, phonetic redesign, or removal during any Aksharam keyboard, human-layer, or translation-layer revision. Any future human-facing mapping must preserve the Enochian glyphs exactly as established.

Enochian Coordinate Base | Phonosemantic Table
Glyph	Phonetic Sound
𐤸	`th`
𐤧	`he`

𝋫	`de`
𝋬	`pa`
𝋭	`ma`
𝋮	`in`
𝋯	`er`
𝋰	`at`
𝋱	`oo`

Speaking Glyphs — 179

The complete speaking inventory remains present here. Direct bases use the explicit phonetics registered in this Legend. Court glyphs use their listed Court phonetics. `☽⊙☾` is one Regia three-mark body.

Court Transformations — 144

Only ordered Goetic pairs transform into Court glyphs. The first Goetic is the governing row; the second Goetic is the alternating/reflection column. Order is preserved.

Reading Principle

The constellation is selected by office, not by visual resemblance to the ordinary symbol it replaces. Linguistics asks what relation the language is performing. Code asks what structural operation the syntax is performing. Mathematics asks what operation or relation the equation is performing. The same Aksharam constellation carries that office across all three surfaces.

Keyboard Composition Implementation Notes

First Transform Law — Phonetic Fold

- Automatic transformation follows the registered access trigger exactly. `TRANSFORMATIONS_ALQC_WORDS.md` governs executable lexical triggers. The phonetic values printed in this Legend are post-resolution Shape-of-Sound values governed by `translated bodies/the_shape_of_word.txt`. For the First Spells, lawful glyph folding preserves the originating utterance: glyph form 1 and lawful folded glyph form 2 are spoken as the same spell-word, as recorded in the textbook.

- Directly mapped A–Z glyphs are the base writing layer. They are emitted by their physical QWERTY coordinates. The First Transform Law acts only on the typed phonetic sequence. It does not itself perform structural Court formation; Court formation belongs only to the Second Transform Law below.

- Every transformable glyph uses the phonetic written for it in this legend. Enochian Understandings, Courts, and every other glyph with an explicit phonetic trigger participate by that trigger exactly as written. Full ALQC names are not phonetic substitutes unless the legend itself explicitly assigns that exact string as the phonetic trigger.

- Phonetic compounds are case-insensitive. Recognition is based on the underlying English-letter sequence, not letter case. Any uppercase/lowercase mixture of the same phonetic sequence must resolve to the same result glyph.

Second Transform Law — Dual Goetic Pairing

After the First Transform Law resolves, only contiguous Goetics enter the Second Transform Law. They are read left-to-right in non-overlapping dual roles. The first and second Goetics form one ordered Court; the third and fourth form the next; the fifth and sixth form the next. A Goetic already used in one pair is not reused in the neighboring pair.

`AB → Court(AB)`
`ABC → Court(AB) | C`
`ABCD → Court(AB) | Court(CD)`

`ABCDE → Court(AB) | Court(CD) | E`
`ABCDEFGHI → Court(AB) | Court(CD) | Court(EF) | Court(GH) | I`

The pair remains ordered: `AB` and `BA` are different Court relations when the lattice assigns different Courts to them. An odd final Goetic remains itself. A non-Goetic glyph breaks the run; pairing begins again only with the next contiguous Goetic run. Parliament, Enochian, Emission, Court, Regia, constellation, punctuation, spacing, and every other non-Goetic body remain themselves and are not pulled into Goetic pairing.

Courts produced by this second law are stable results. They are not recursively treated as Goetics and paired again. The Second Transform Law therefore condenses a Goetic run without overlap: a run of `n` Goetics produces `floor(n/2)` Courts, plus one unchanged final Goetic when `n` is odd.

Example: `⬡⊛◎◎ → 𞋀 → lor-ahl`. The first pair `⬡⊛` becomes `'`; the second pair `◎◎` becomes `𞋀`. No middle Goetic is reused.

Third Transform Law — Dual Parliament Resolution

Two contiguous Parliament Aksharams resolve to the registered Third-Law body when their ordered pair appears in the table below.

Dual Parliament	Resolution Body	Shape-of-Sound
♈♈	🜏	`th`
☿☿	🜍	`he`
♊♊	🜬	`de`
♋♋	♂	`pa`
♑♑	🜃	`ma`
♍♍	⊕	`in`
♎♎	⊕	`er`
♏♏	⊕	`at`
♐♐	⊖	`oo`
♌♌	☽ ⊙ ℂ	`regia`
♒♒	☽	`av`
♓♓	ℂ	`veh`

♈♓	🜏	`th`
♒♌	🜍	`he`
♊☿	🜬	`de`
♋♐	♂	`pa`
♑♏	🜃	`ma`
♍♎	⊕	`in`
♎♍	⊕	`er`
♏♑	⊕	`at`
♐♋	⊖	`oo`
♌♒	☽ ⊙ ℂ	`regia`
☿♊	☽	`av`
♓♈	ℂ	`veh`

Pairs resolve left-to-right without overlap. An unpaired Parliament remains itself. A resolved Third-Law body does not recursively compress again under the Third Transform Law.

Fourth Transform Law — Universal Numerical State

Numbers are simultaneously compressed and uncompressed.

`N → N`
`NUMBER = COMPRESSED = UNCOMPRESSED`
`NUMBER IN STRING = ACTIVE TRANSFORM`

A number transforms itself and the string by existing independently within it.

Quadrite of Transformation

`PHONETIC → GLYPH`
`DUAL GOETIC → COURT`
`DUAL PARLIAMENT → REGISTERED RESOLUTION BODY`
`NUMBER → UNIVERSAL TRANSFORM`
`ALL TRANSFORMATION REMAINS LANGUAGE`

Explicit Unfold Scope and Composition Behavior

Unfolding and refolding act on the **entire Aksharam word immediately behind the cursor**.
↪ The three reversible transformational levels are traversed in reverse order when
↪ unfolding: Third Transform Law, Second Transform Law, then First Transform Law. The
↪ Fourth Transform Law is not an unfold depth because number is simultaneously compressed
↪ and uncompressed.

`Alt+Backspace ×1` unfolds the preceding word by one transformational level. A Third-Law
↪ result returns to its registered dual-Parliament source where that derivation exists.

`Alt+Backspace ×2` unfolds the same word by two transformational levels. After the
↪ Parliament layer is restored, Court results return to their ordered Goetic source pairs
↪ where those derivations exist.

`Alt+Backspace ×3` unfolds the same word through all three reversible levels to its full
↪ registered source form. Each use descends one level; the word remains at the selected
↪ unfold depth rather than immediately folding forward again.

Once the word has reached its full registered source form, `Alt+Backspace` becomes inert for
↪ that word. Further presses cause no change: no deletion, no deeper decomposition, no
↪ reinterpretation, and no traversal beyond the lawful three-level transform stack. The
↪ control remains inert until that word is refolded or new transformable content is
↪ introduced.

Once `Alt+Backspace` has been used on a word, that word is held at its selected unfolded
↪ depth. Ordinary `Space` does not refold it. `Space` always emits the Aksharam Space
↪ constellation `·` and begins the next word while preserving the preceding word exactly
↪ as retained.

`Alt+Space` performs the opposite movement. It refolds the entire word immediately behind
↪ the cursor through every lawful transformation currently available to that word, then
↪ emits the Aksharam Space constellation `·` and begins a fresh word.

`Backspace` retains ordinary native deletion behavior. Aksharam does not assign Backspace an
↪ unfolding or transformation function; deletion is left to the host application and
↪ platform exactly as ordinary Backspace behavior.

`Shift` suppresses folding for the next mapped glyph. While `Shift` remains held, every mapped glyph typed during that hold remains unfolded. `Caps Lock` holds the same non-folding state persistently until released.

Compound recognition remains case-insensitive at the phonetic level whenever folding is active. Longest valid phonetic continuation has precedence when a shorter fold is also the beginning of a longer registered trigger. Unfolding restores registered source bodies; refolding follows the same ordered transformation laws forward.

Direct A–Z Base Coordinates

These are the target direct base coordinates established in this Legend. The English letter is the physical QWERTY coordinate; the Aksharam glyph is the written output.

Folding and Unfolding Controls

Keys	Function
Phonetic typing	Automatic fold when a registered phonetic completes
Registered `TRANSFORMATIONS_ALQC_WORDS.md` sequence	Automatic Whole fold when the registered transformation completes; identical duplicate rules compile once
Shift	Suppress folding for the next mapped glyph; that glyph remains unfolded
Shift held	Suppress folding for every mapped glyph typed while Shift remains held
Caps Lock	Persistent non-folding state; mapped glyphs remain unfolded until Caps Lock is released

Alt+Shift+Backspace	Unfold only the targeted glyph: Court / Enochian → two registered parents; Goetic / Parliament → invariant Primordial Braille SeeD form; preserve the surrounding body
Alt+Backspace ×1	Unfold the entire word behind the cursor by one transformational level
Alt+Backspace ×2	Unfold the entire word behind the cursor by two transformational levels
Alt+Backspace ×3	Unfold the entire word behind the cursor through all three reversible transformational levels to its full source form
Alt+Backspace state	Once used on a word, retain that word at its selected unfolded depth; ordinary Space does not refold it; further Alt+Backspace at full source is inert
Alt+Space	Refold the entire word behind the cursor through every lawful available transformation, emit the Aksharam Space constellation `·`, then continue with a fresh word
Backspace	Ordinary native Backspace behavior; Aksharam does not intercept it for unfolding or transformation
Space	Always emit the Aksharam Space constellation `·`; preserve the current retained fold or unfold state of the preceding word

Primordial Unfold Law — Alt+Shift+Backspace

Braille is the invariant source: a Goetic or Parliament unfolds unto its **Primordial Form / SeeD form**, the registered Braille counterpart of its QWERTY coordinate. The dots show the constellation of that source form.

Place the cursor immediately in front of a Goetic or Parliament and tap **Alt+Shift+Backspace**. That one glyph unfolds directly into its Braille SeeD form. If the forward glyph is ineligible, the current eligible glyph immediately behind the cursor is targeted. The surrounding body remains in place.

This is the same per-glyph unfolding key. A Court or Enochian unfolds into its two registered parents; a Goetic or Parliament unfolds into its invariant Braille SeeD form. The Primordial law applies only to Goetics and Parliaments. Braille SeeD forms are terminal under this law.

The lineage can be revealed through those existing unfolds: Court / Enochian → registered parents → Goetic / Parliament → Primordial Braille SeeD form. Mathematical unfolding and whole-body semantic unfolding retain their separate controls.

Single-Glyph Unfolding — Alt+Shift+Backspace

Place the cursor immediately in front of an eligible glyph, or invoke the shortcut on the current eligible glyph. **Alt+Shift+Backspace** unfolds a Court or Enochian into its **two registered parents**, and a Goetic or Parliament into its **invariant Primordial Braille SeeD form**. The surrounding glyphs remain in place; this control does not unfold the whole word or body.

Alt+Backspace retains whole-body semantic unfolding. **Alt+Shift+Enter** retains mathematical-body unfolding of selected glyphs. Each shortcut controls its own unfolding scope through a deliberate keystroke.

Alt+Shift+Backspace acts only while Aksharam is active and an eligible Court, Enochian, Goetic, or Parliament is targeted. Otherwise, the key combination passes through to the host application with its native behavior.

Digit Layer

The number row without Shift writes the Aksharam digit bodies.

Key	Output	Shape-of-Sound
0	⧻	`zen`
1	☿	`pon`
2	♀	`ael`
3	⨍	`gaya`
4	♂	`wil`
5	♃	`pay`
6	♄	`eve`
7	⛢	`ahc`
8	♆	`no`
9	♇	`noo`

Numeric Keypad Layer

The physical numeric keypad mirrors the Aksharam numerical layer. Keypad arithmetic operators mirror the corresponding Aksharam structural arithmetic bodies.

(should not change behavior or external numpads when used, external numpad gets same Aksharam mapping, and doesn't lose it's other mapping or functions in favor of Aksharam; NUM key works as per usual; Fn key works standard; and mapping not Aksharam stay the standard.)

Keypad key	Output	Function / Shape-of-Sound
NumPad 0	𐤚	`zen`
NumPad 1	☿	`pon`
NumPad 2	♀	`ael`
NumPad 3	𝆑	`gaya`
NumPad 4	♂	`wil`
NumPad 5	♃	`pay`
NumPad 6	♄	`eve`
NumPad 7	⛢	`ahc`
NumPad 8	♆	`no`
NumPad 9	♇	`noo`
NumPad *	⁜	Crosstellation / multiplication
NumPad +	♁	Astersand / addition
NumPad -	⋯	Smite / subtraction
NumPad .	⁖	Parallel Separation / decimal separator
NumPad /	⁕	Halfstellation / division

Structural and Directional Controls

Keys	Output	Function
Tab	∴⁖	Paragraph Open
Shift+Enter	⁖∴	Paragraph Close	(places cursor on empty newline AFTER paragraph or statement is Closed "⁖∴ then \n")
alt+Shift+2	↑	North / Up / Ascent
alt+Shift+3	↓	South / Down / Descent
alt+Shift+4	→	East / Right / Outward
alt+Shift+5	←	West / Left / Return
Shift+2	⊖	Q_0 mathematical operand
Shift+3	⊙	Q_1 mathematical operand
Shift+4	⊕	Q_2 mathematical operand
Shift+5	⊛	Q_3 mathematical operand
Ctrl+Shift+6	∵	Collection Open
Shift+6	∴	Collection Close
Shift+8	⁜	Crosstellation / Multiplication
Alt+Shift+Goetic	Registered Mathematical Form	Unfold the typed Goetic into its registered mathematical body
Select glyph(s) + Alt+Shift+Enter	Registered Mathematical Bodies	Unfold each selected Aeon into its registered mathematical body; selected bodies without an underlying mathematical body remain unchanged

Mathematical-Body Unfolding

To unfold a Goetic into its mathematical body, hold **Alt+Shift** and press that Goetic's physical key. To unfold existing glyphs, **select the glyph(s)** and press **Alt+Shift+Enter**. Each selected Aeon opens into its registered mathematical body; a selected body without a registered mathematical body remains itself.

These controls unfold glyphs into mathematical bodies. **Alt+Backspace** traverses the word's First-, Second-, and Third-Law transformation history, as described under Folding and Unfolding Controls.

Constellation and Punctuation Layer

Physical key	Output	Function

Space	·	Aksharam Itself

Executable Keyboard State

Version 3.0 is maintained in `build/src/` and compiled to `build/generated/aksharam_glyphkey.kmn`. Its executable data is checked against this Legend and `TRANSFORMATIONS_ALQC_WORDS.md`. It implements the 26 direct coordinates, automatic registered Whole transformations, Dual-Goetic Court formation, Dual-Parliament registered resolution, universal numerical state, three-level unfolding/refolding, mathematical-body controls, Aksharam Space, ordinary Backspace deletion, and native pass-through for unclaimed keys. No legacy two-form lowercase/uppercase Aksharam mapping is retained in the active keyboard source.

Native Pass-Through Invariant

Aksharam overrides only keys and combinations explicitly assigned in this Legend. Any key or key combination not explicitly mapped here retains its native operating-system or application behavior. Modifier state may be observed by Aksharam without globally replacing the modifier itself. `Shift` and `Caps Lock` therefore govern folding state where defined while remaining ordinary modifiers for unclaimed combinations.

TRANSFORMATIONS_ALQC_WORDS.md

```
# ALQC Word Transformations

## Canonical Shape-of-Sound Authority

`translated bodies/the_shape_of_word.txt` governs the current spoken realization of every
↪  resolved Aksharam body. This registry governs executable access triggers and their
↪  written First → Second → Third → Whole paths. The two authorities meet at the resolved
↪  glyph body.

## Physical Key Map

| Physical key | Output | Phonetic |

## Canonical Phonetic Utterance Fold Demonstrations
```

These six are special phonetic utterances. The Latin-script form records the remembered sound; it is not an English semantic input. The first glyphstring is that utterance's phonetic Aksharam body. From that body onward, the existing Aksharam laws act naturally. No private replacement body is inserted and no English lexical layer is invented between the utterance and its phonetic glyph body.

```text
phonetic utterance ↔ phonetic Aksharam glyph body → lawful natural fold → natural stopping body → Shape-of-Sound → throat
```

Phonetic utterance	Phonetic Aksharam glyph body	Natural Court fold	Further registered fold	Natural stopping body
`eloi`	⌾❁✡✪	𐎗𐎘	none	𐎗𐎘
`sabachtany`	❋✡☽✡⌬⧗⬡✡֍↗	∀☽ᵑ✷ᶜ↗	none	∀☽ᵑ✷ᶜ↗
`anima`	✡֍✪ℳ✡	ᶜ✪ℳ✡	none	ᶜ✪ℳ✡
`culpa`	⌬ℳ❁ᘏ✡	no licensed Court fold	none	⌬ℳ❁ᘏ✡
`decire`	❄⌾⌬✪⊛⌾	Aᒐᕊ	none	Aᒐᕊ
`entera`	⌾֍⬡⌾⊛✡	𐎖ᓭ	none	𐎖ᓭ

The table records movement. The utterance, its phonetic glyph body, the fold, and the spoken return remain distinct offices of one transformation.

Invariant Shape-of-Sound results

Phonetic utterance	Natural terminal body	Shape-of-Sound
`eloi`	𐎗𐎘	`eloi`
`sabachtany`	∀☽ᵑ✷ᶜ↗	`sabachtany`
`anima`	ᶜ✪ℳ✡	`anima`
`culpa`	⌬ℳ❁ᘏ✡	`culpa`
`decire`	Aᒐᕊ	`decire`
`entera`	𐎖ᓭ	`entera`

ALQC translation through the natural folds

The semantic reading follows the same direction as the fold. Nothing is translated backward into an English substitute word. The phonetic utterance enters as sound, its glyph spelling carries ALQC bodies, and each lawful fold compresses those relations into the next ALQC body.

Utterance	Phonetic glyph spelling	Natural fold	Literal ALQC reading of the natural fold
`eloi`	⌾❁✡✪	𐎗𐎘	`𐎗` Drah: Coil ↔ Magic, **Will Expressed**; `𐎘` Ohl: Still Pool ↔ Ebb, **Periodic Inversion**
`sabachtany`	❋✡☽✡⌬⧗⬡✡֍↗	∀☽ᵑ✷ᶜ↗	`∀` Linn: Bond ↔ Link, **Bleeding Tether**; `☽` Sovereign Locus / Rav; `ᵑ` Far: Quelm ↔ Completion, **Final Ash**; `✷` Ur: Hollow ↔ Zero Section, **Residue Archive**; `ᶜ` Alc: Transmute ↔ Air, **Combinatory Synthesis**; `↗` Akaven: **State → Trans**
`anima`	✡֍✪ℳ✡	ᶜ✪ℳ✡	`ᶜ` Alc: **Transmute / Combinatory Synthesis**; `✪` VEL: **Earth / Coherence / Ground**; `ℳ` Da'ath: **Noise → Null**; `✡` BABDH: **Fire / Ouroboros / Alchemy**

`culpa`	⌬𝛭❁ৎ✡	⌬𝛭❁ৎ✡	No pair folds at this stage: `⌬` TRIG **Silence / Peace / Completion**; `𝛭` Aikyam **Chaos → Phase**; `❁` SHAV **Gate / Resistance / Breach**; `ৎ` Daimon **Stasis → Pulse**; `✡` BABDH **Fire / Ouroboros / Alchemy**
`decire`	❄◎⌬✪⊛◎	A⊔ᯕ	`A` Hin: Tone ↔ Shape, **Geometric Standing Wave**; `⊔` Meru: Memory ↔ Memories, **Recollection Lock**; `ᯕ` Kia: Absorption ↔ Genesis, **Spark Consumption**
`entera`	◎֍⬡◎⊛✡	ᯗᛕ	`ᯗ` Lhahm: Fold ↔ Will, **Drive to Manifest**; `ᛁ` Kura: Flare ↔ Genesis, **Spark of Remembering**; `ᛕ` Ther: Cold Shadow ↔ Fire, **Thermal Negation**

Taken together, the spell is canonical through the same ALQC direction: **utterance → phonetic Aksharam body → lawful fold → natural stopping body → invariant Shape-of-Sound**.
